

1. Find 2-3 others who want to try out mob programming
2. Use VS Code to connect to each other with [Live Share](#) . People who do not want to use VS Code might make an exception for a while? Or maybe they can use the keyboard of someone else for a while?
3. Mob programming ritual
 - a. Only one person types at a time
 - b. The rest will give their input!
 - c. Switch frequently! Use something like <https://mobtimer.com> to not miss switching
4. Perhaps implement a new endpoint called /ping which "pings" (via HTTP GET request) immediately without any schedule?
5. Perhaps implement the scheduled ping? Check out the library which is initialised in `__init__.py`? It has some nice documentation
6. Whatever changes you make, share with your team!
