

Extra install tips

- Linux
 - <https://docs.docker.com/engine/install/linux-postinstall/>

Exercise 1

- <https://www.docker.com/101-tutorial/>
 - a. Pick the one on the left, which starts with...
 - b. Type the following command in your terminal: `docker run -dp 80:80 docker/getting-started`
 - c. Open your browser to `http://localhost`

Exercise 2

1. Make a container that runs `pingurl` which you can "talk to" with Postman as usual and create, delete urls to monitor
