

Chapter 7: Transport Layer

Introduction to Networking

Cisco | Networking Academy®
Mind Wide Open™

Transportation of Data

Role of the Transport Layer

The transport layer is responsible for establishing a temporary communication session between two applications and delivering data between them.

TCP/IP uses two protocols to achieve this:

- Transmission Control Protocol (TCP)
- User Datagram Protocol (UDP)

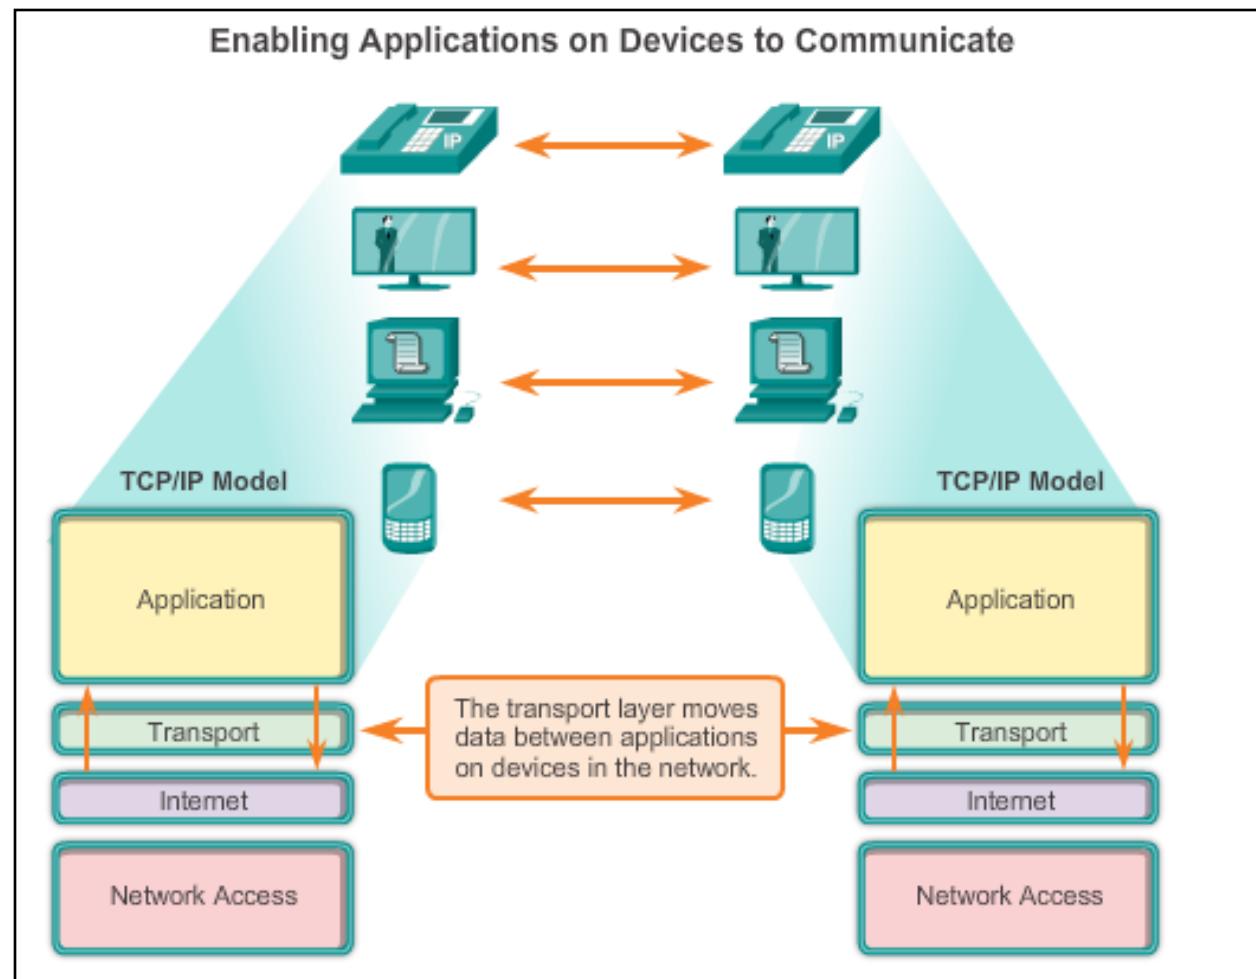

Primary Responsibilities of Transport Layer Protocols

- Tracking the individual communication between applications on the source and destination hosts
- Segmenting data for manageability and reassembling segmented data into streams of application data at the destination
- Identifying the proper application for each communication stream

Transportation of Data

Role of the Transport Layer (Cont.)

Transportation of Data

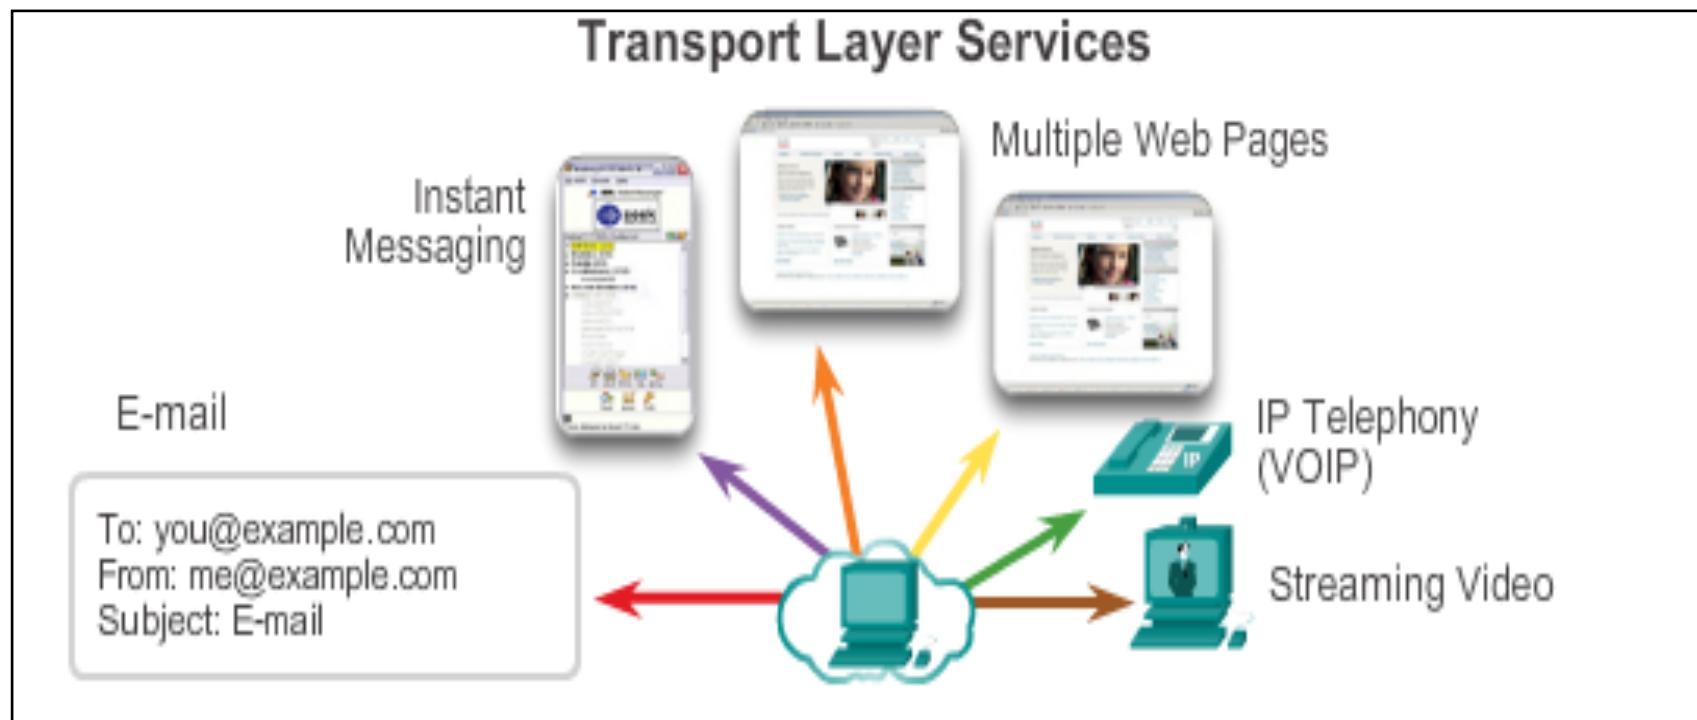

Conversation Multiplexing

Segmenting the Data

- Enables many different communications, from many different users, to be interleaved (multiplexed) on the same network, at the same time.
- Provides the means to both send and receive data when running multiple applications.
- Header added to each segment to identify it.

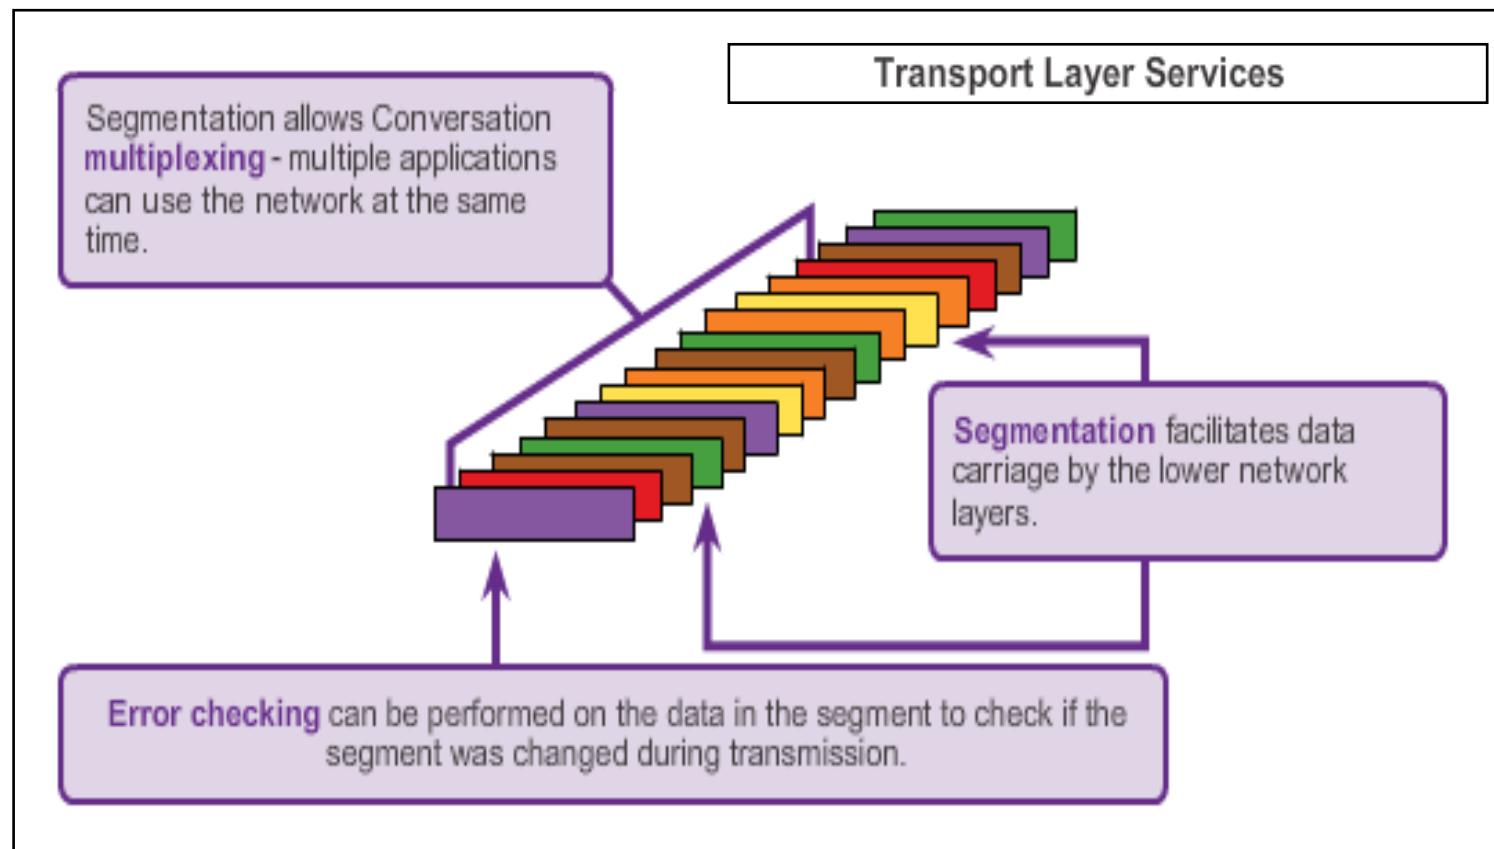

Transportation of Data Conversation Multiplexing (Cont.)

Transportation of Data

Conversation Multiplexing (Cont.)

Transportation of Data

Transport Layer Reliability

Different applications have different transport reliability requirements.

TCP/IP provides two transport layer protocols, **TCP and UDP**.

TCP

- Provides reliable delivery ensuring that all of the data arrives at the destination.
- Uses acknowledged delivery and other processes to ensure delivery
- Makes larger demands on the network – more overhead.

UDP

- Provides just the basic functions for delivery – no reliability.
- Less overhead.

TCP or UDP

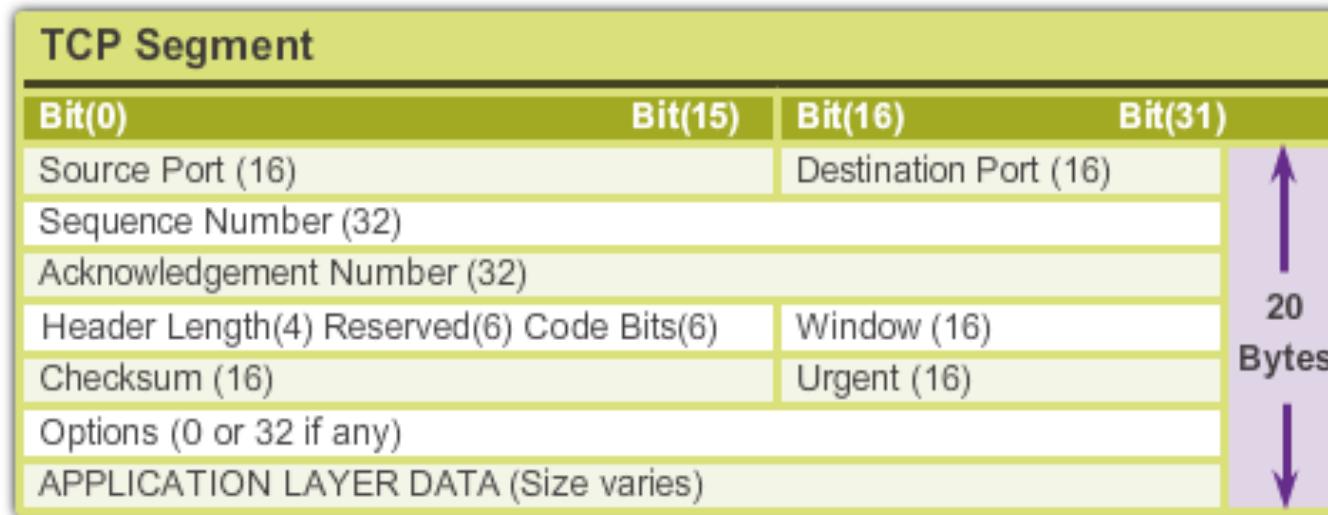

- There is a trade-off between the value of reliability and the burden it places on the network.
- Application developers choose the transport protocol based on the requirements of their applications.

Introducing TCP and UDP

Introducing TCP

- Defined in RFC 793
- Connection-oriented – Creates a session between the source and destination
- Reliable delivery – Retransmits lost or corrupt data
- Ordered data reconstruction – Reconstructs numbering and sequencing of segments
- Flow control – Regulates the amount of data transmitted
- Stateful protocol – Tracks the session

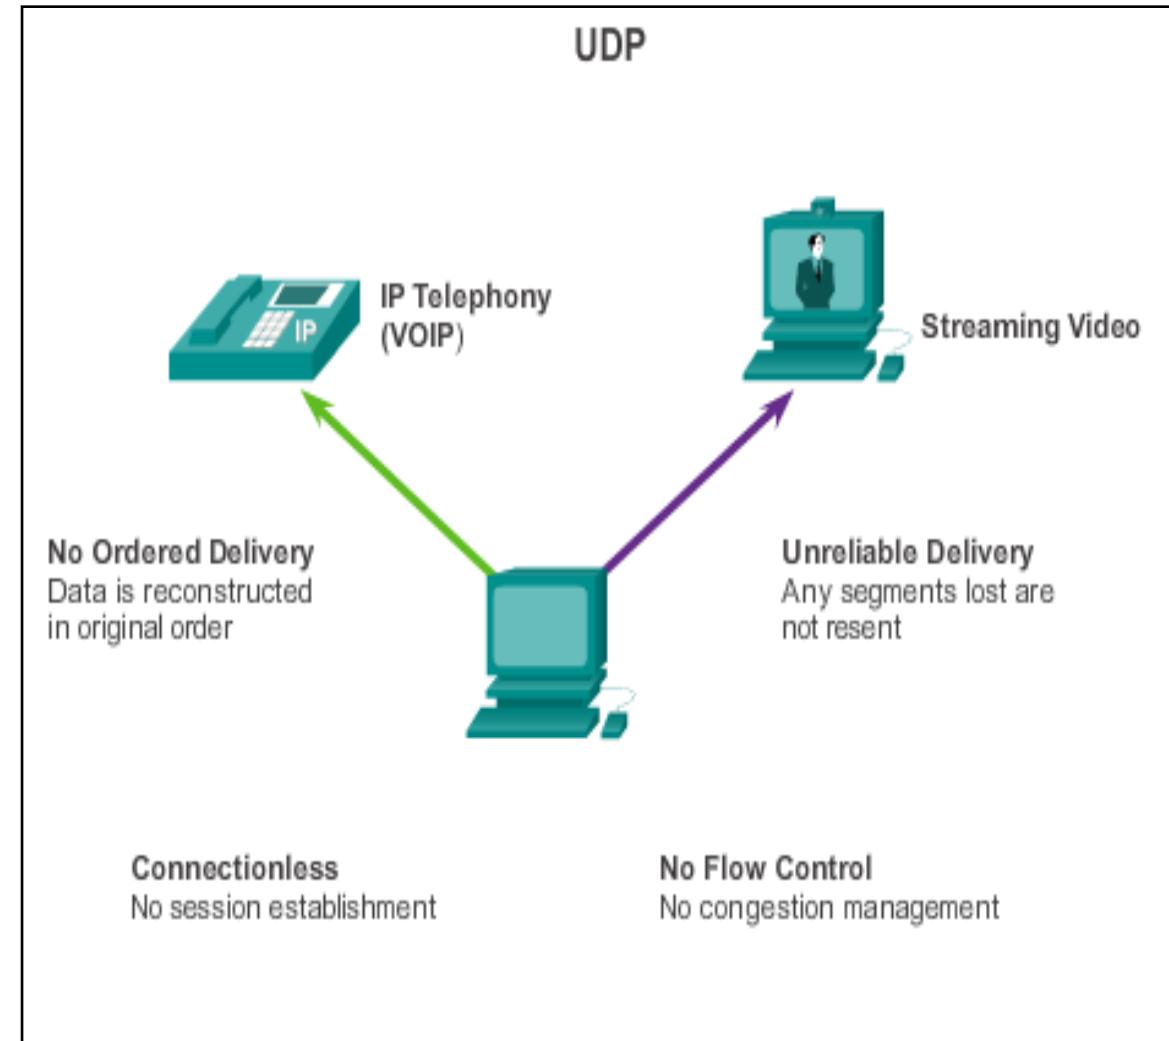

Introducing TCP and UDP

Introducing UDP

- RFC 768
- Connectionless
- Unreliable delivery
- No ordered data reconstruction
- No flow control
- Stateless protocol

Applications that use UDP:

- Domain Name System (DNS)
- Video Streaming
- VoIP

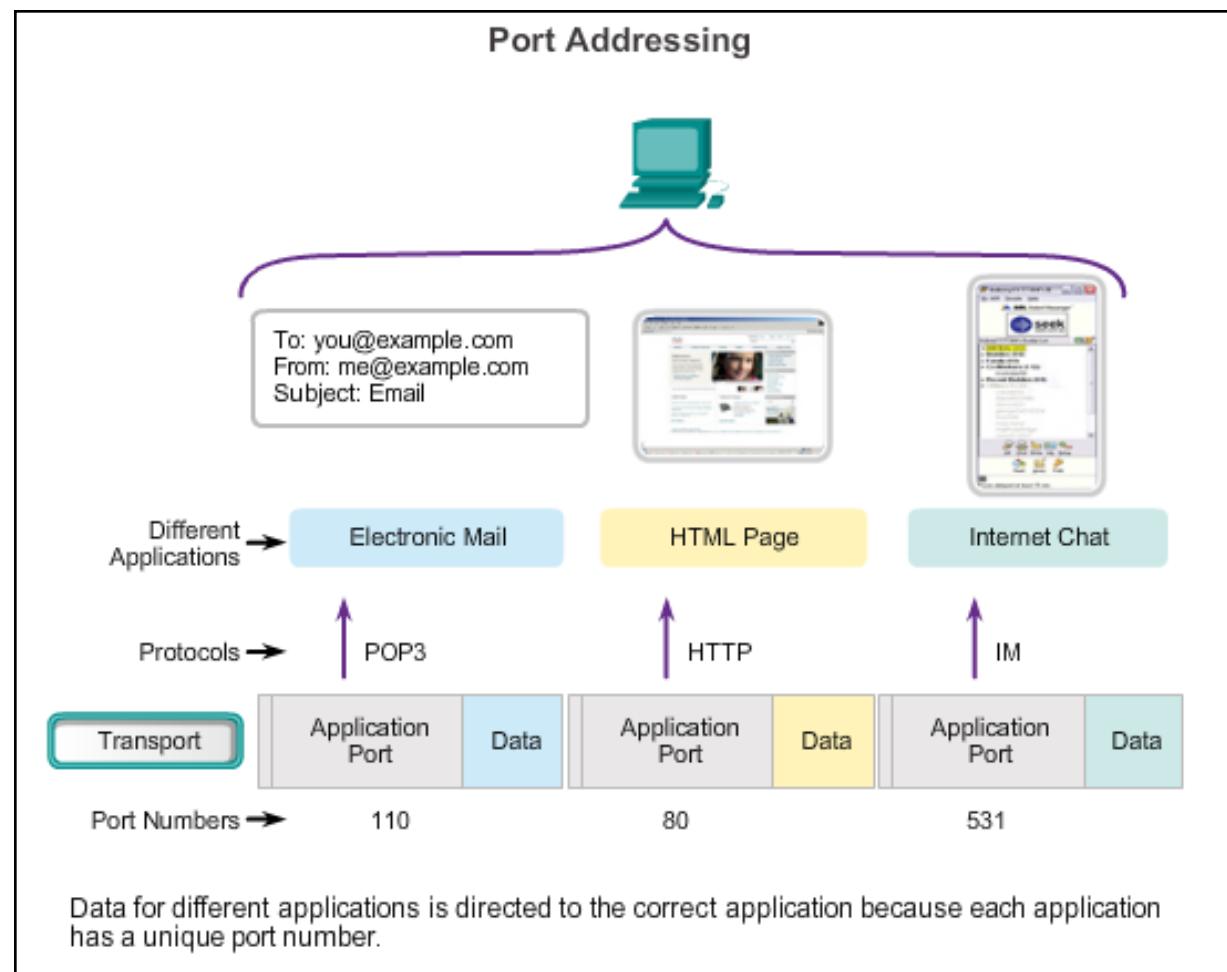

Introducing TCP and UDP

Separating Multiple Communications

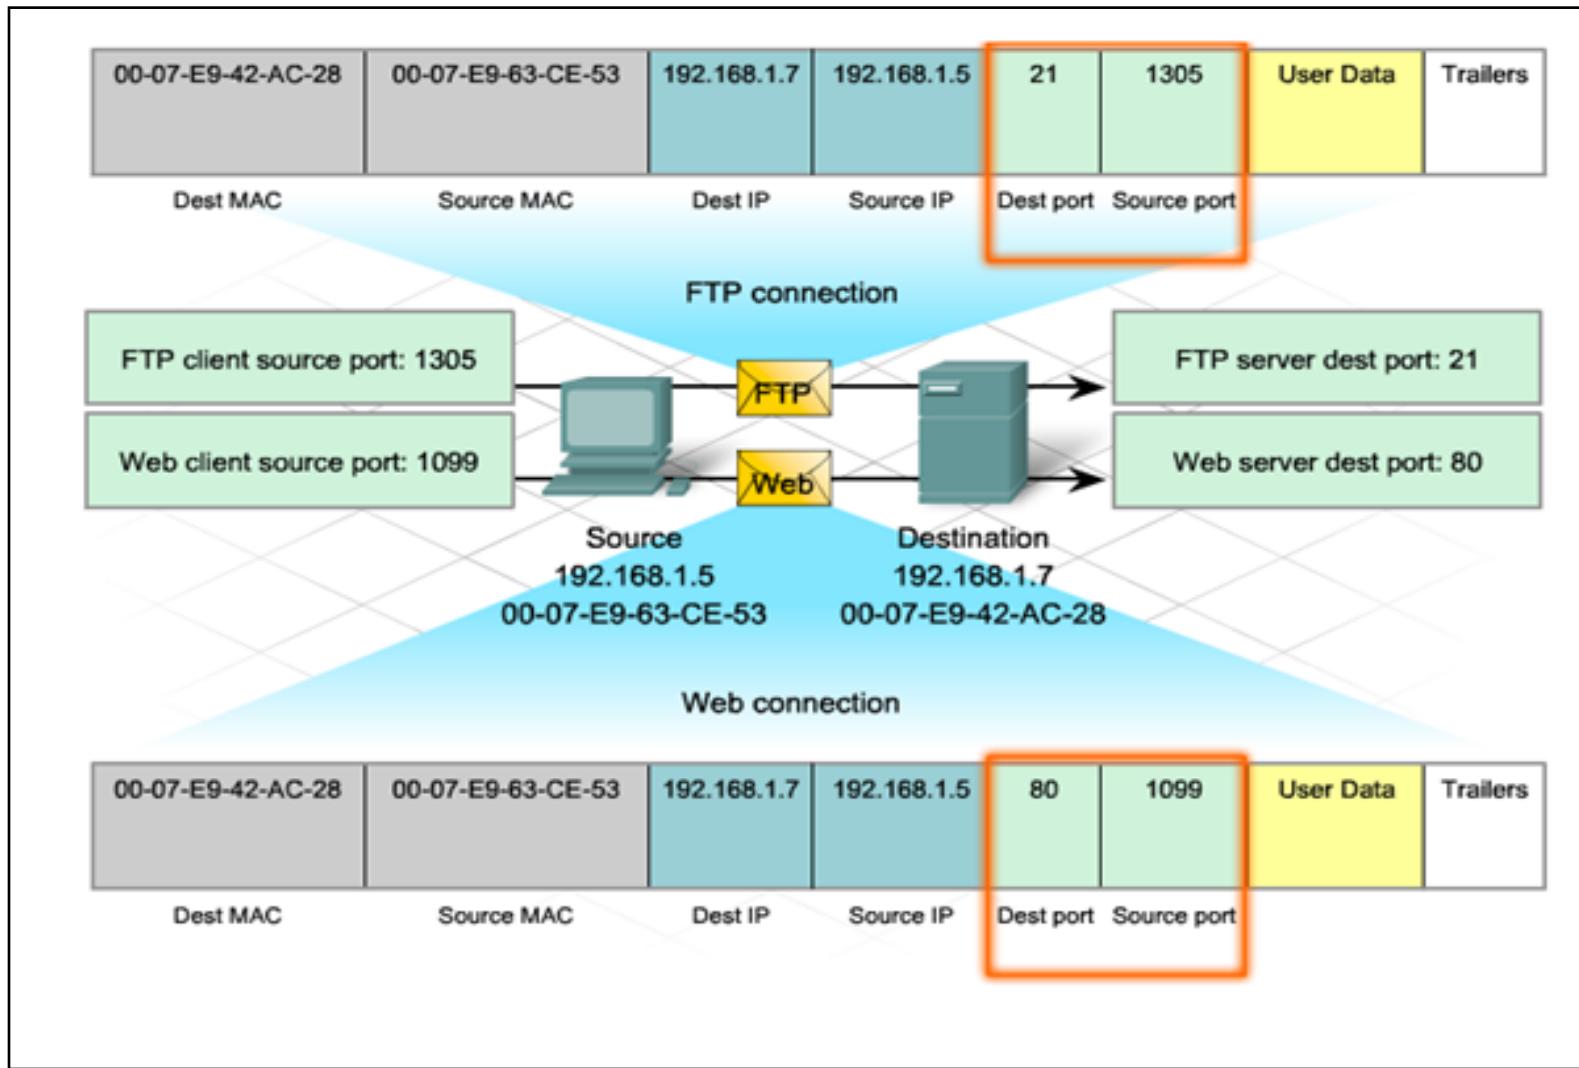

TCP and UDP use port numbers to differentiate between applications.

Introducing TCP and UDP

TCP and UDP Port Addressing

Introducing TCP and UDP

TCP and UDP Port Addressing (Cont.)

Port Numbers

Port Number Range	Port Group
0 to 1023	Well Known (Contact) Ports
1024 to 49151	Registered Ports
49152 to 65533	Private and/or Dynamic Ports

Registered TCP Ports:

1863 MSN Messenger
2000 Cisco SCCP (VoIP)
8008 Alternate HTTP
8080 Alternate HTTP

Well Known TCP Ports:

21 FTP
23 Telnet
25 SMTP
80 HTTP
110 POP3
194 Internet Relay Chat (IRC)
443 Secure HTTP (HTTPS)

Introducing TCP and UDP

TCP and UDP Port Addressing (Cont.)

Registered UDP Ports:

- 1812 RADIUS Authentication Protocol
- 5004 RTP (Voice and Video Transport Protocol)
- 5040 SIP (VoIP)

Well Known UDP Ports:

- 69 TFTP
- 520 RIP

Registered TCP/UDP Common Ports:

- 1433 MS SQL
- 2948 WAP (MMS)

Well Known TCP/UDP Common Ports:

- 53 DNS
- 161 SNMP
- 531 AOL Instant Messenger, IRC

TCP Communication

TCP Connection, Establishment and Termination

Three-Way Handshake

- Establishes that the destination device is present on the network
- Verifies that the destination device has an active service and is accepting requests on the destination port number that the initiating client intends to use for the session
- Informs the destination device that the source client intends to establish a communication session on that port number

TCP Communication

TCP Three-Way Handshake – Step 1

Step 1: The initiating client requests a client-to-server communication session with the server

TCP 3-Way Handshake (SYN)

The screenshot shows a protocol analyzer interface with the following details for Frame 10:

- Frame 10: 62 bytes on wire (496 bits), 62 bytes captured.
- Ethernet II, Src: VMware_be:62:88 (00:50:56:be:62:88)
- Internet Protocol Version 4, Src: 10.1.1.1 (10.1.1.1)
- Transmission Control Protocol, src Port: kiosk (1061)
 - Source port: kiosk (1061)
 - Destination port: http (80)
 - [stream index: 0]
 - Sequence number: 0 (relative sequence number)
 - Header length: 28 bytes
 - Flags: 0x02 (SYN)
 - 000. = Reserved: Not set
 - 0 = Nonce: Not set

A protocol analyzer shows initial client request for session in frame 10

TCP segment in this frame shows:

- SYN flag set to validate an Initial Sequence Number
- Randomized sequence number valid (relative value is 0)
- Random source port 1061
- Well-known destination port is 80 (HTTP port) indicates web server (httpd)

TCP Communication

TCP Three-Way Handshake – Step 2

Step 2: The server acknowledges the client-to-server communication session and requests a server-to-client communication session.

TCP 3-Way Handshake (SYN, ACK)			
10	16.303490	10.1.1.1	192.168.254.254
11	16.304896	192.168.254.254	10.1.1.1
12	16.304925	10.1.1.1	192.168.254.254
13	16.305153	10.1.1.1	192.168.254.254
14	16.307875	192.168.254.254	10.1.1.1

Frame 11: 62 bytes on wire (496 bits), 62 bytes captured
Ethernet II, Src: Cisco_63:74:a0 (00:0f:24:63:74:a0), Dst: 00:00:00:00:00:00 (00:00:00:00:00:00)
Internet Protocol Version 4, Src: 192.168.254.254 (192.168.254.254), Dst: 10.1.1.1 (10.1.1.1)
Transmission Control Protocol, Src Port: http (80), Dst Port: http (80)
Source port: http (80)

A protocol analyzer shows server response in frame 11

- ACK flag set to indicate a valid Acknowledgement number
- Acknowledgement number response to initial sequence number as relative value of 1
- SYN flag set to indicate the Initial Sequence Number for the server to client session
- Destination port number of 1061 to corresponding to the clients source port
- Source port number of 80 (HTTP) indicating the web server service (httpd)

TCP Communication

TCP Three-Way Handshake – Step 3

Step 3: The initiating client acknowledges the server-to-client communication session.

TCP 3-Way Handshake (ACK)				
No.	Time	Source	Destination	
10	16.303490	10.1.1.1	192.168.254.254	
11	16.304896	192.168.254.254	10.1.1.1	
12	16.304925	10.1.1.1	192.168.254.254	
13	16.305153	10.1.1.1	192.168.254.254	
14	16.307875	192.168.254.254	10.1.1.1	

Frame 12: 54 bytes on wire (432 bits), 54 bytes captured
Ethernet II, Src: VMware_Ke:62:88 (00:50:56:be:62:88)
Internet Protocol Version 4, Src: 10.1.1.1 (10.1.1.1)
Transmission Control Protocol, Src Port: k'osk (1061)

A protocol analyzer shows client response to session in frame 12

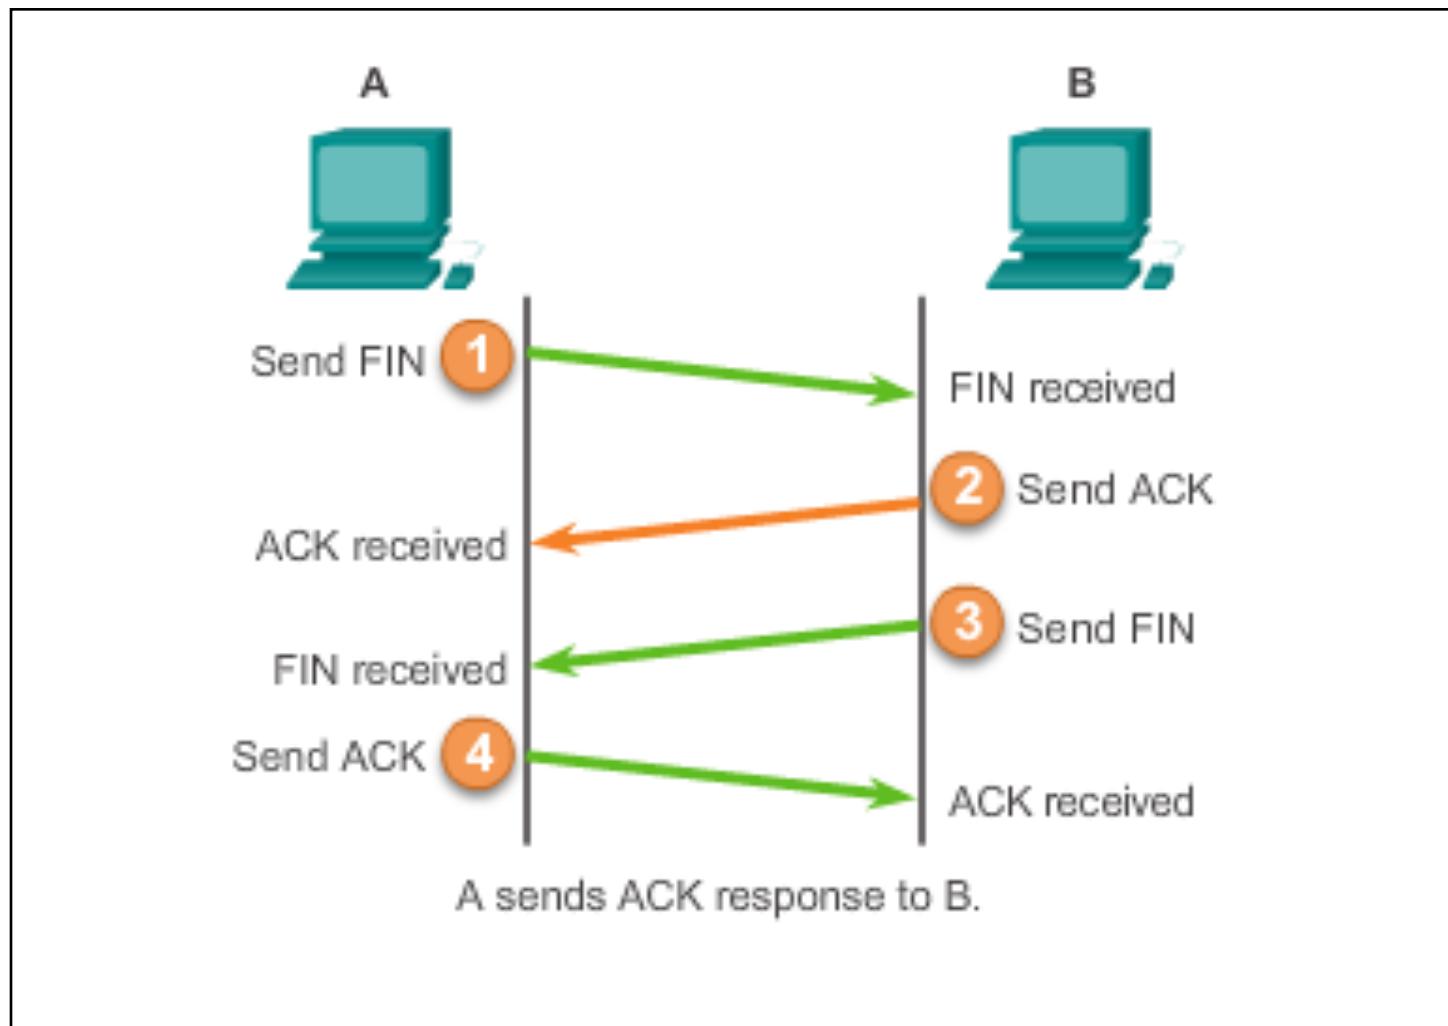

The TCP segment in this frame shows:

- ACK flag set to indicate a valid Acknowledgement number
- Acknowledgement number response to initial sequence number as relative value of 1
- Source port number of 1061 to corresponding
- Destination port number of 80 (HTTP) indicating the web server service (httpd)

TCP Communication

TCP Session Termination

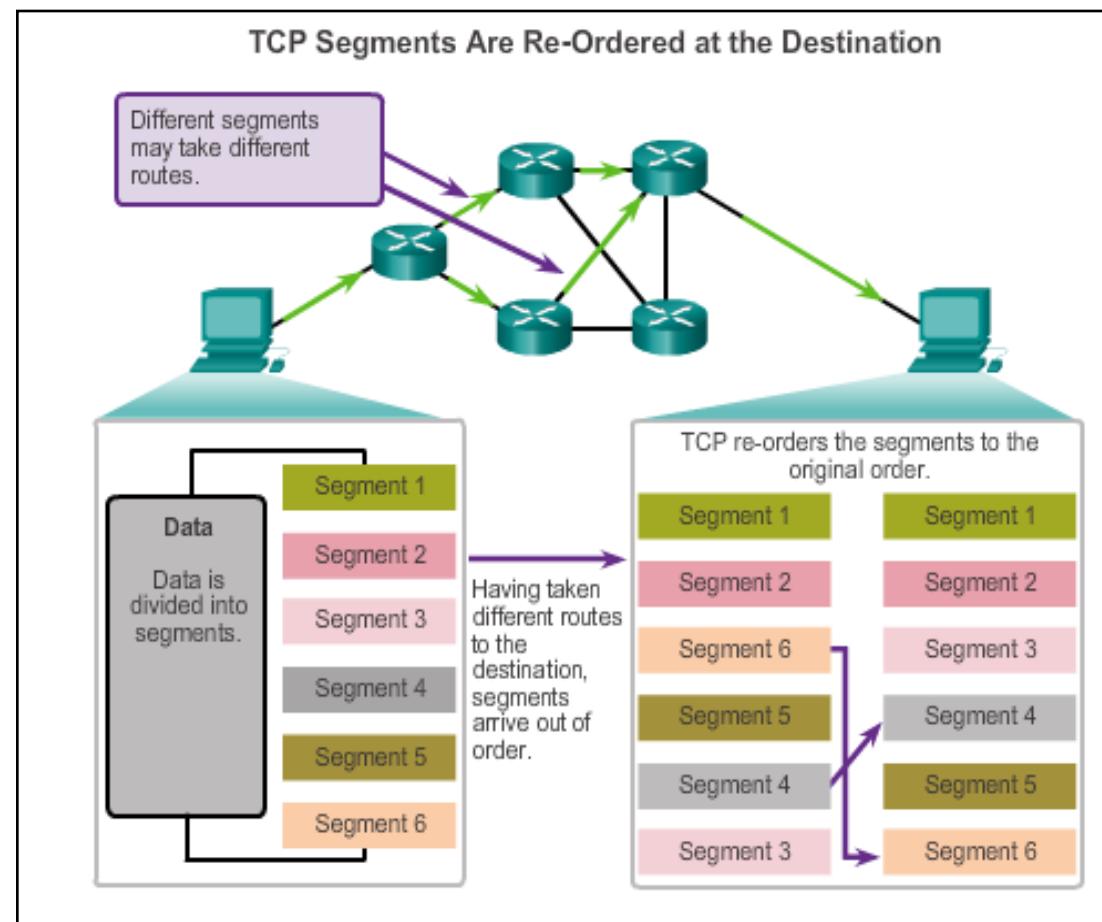

Reliability and Flow Control

TCP Reliability – Ordered Delivery

Sequence numbers are used to reassemble segments into their original order.

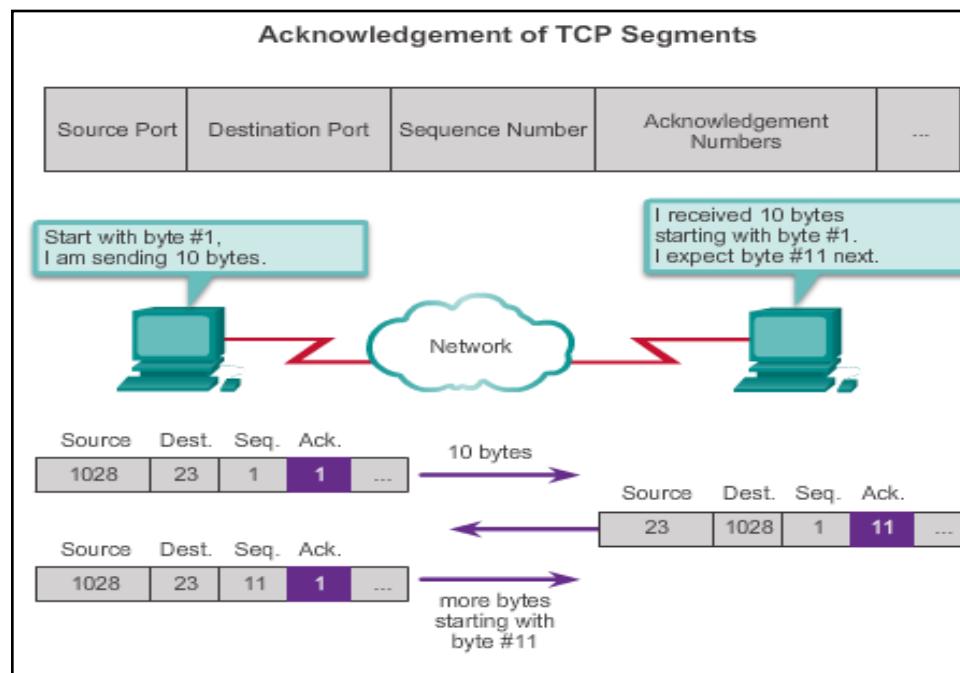

Reliability and Flow Control

Acknowledgement and Window Size

The sequence number and acknowledgement number are used together to confirm receipt.

The window size is the amount of data that a source can transmit before an acknowledgement must be received.

UDP Communication

UDP Low Overhead vs. Reliability

UDP

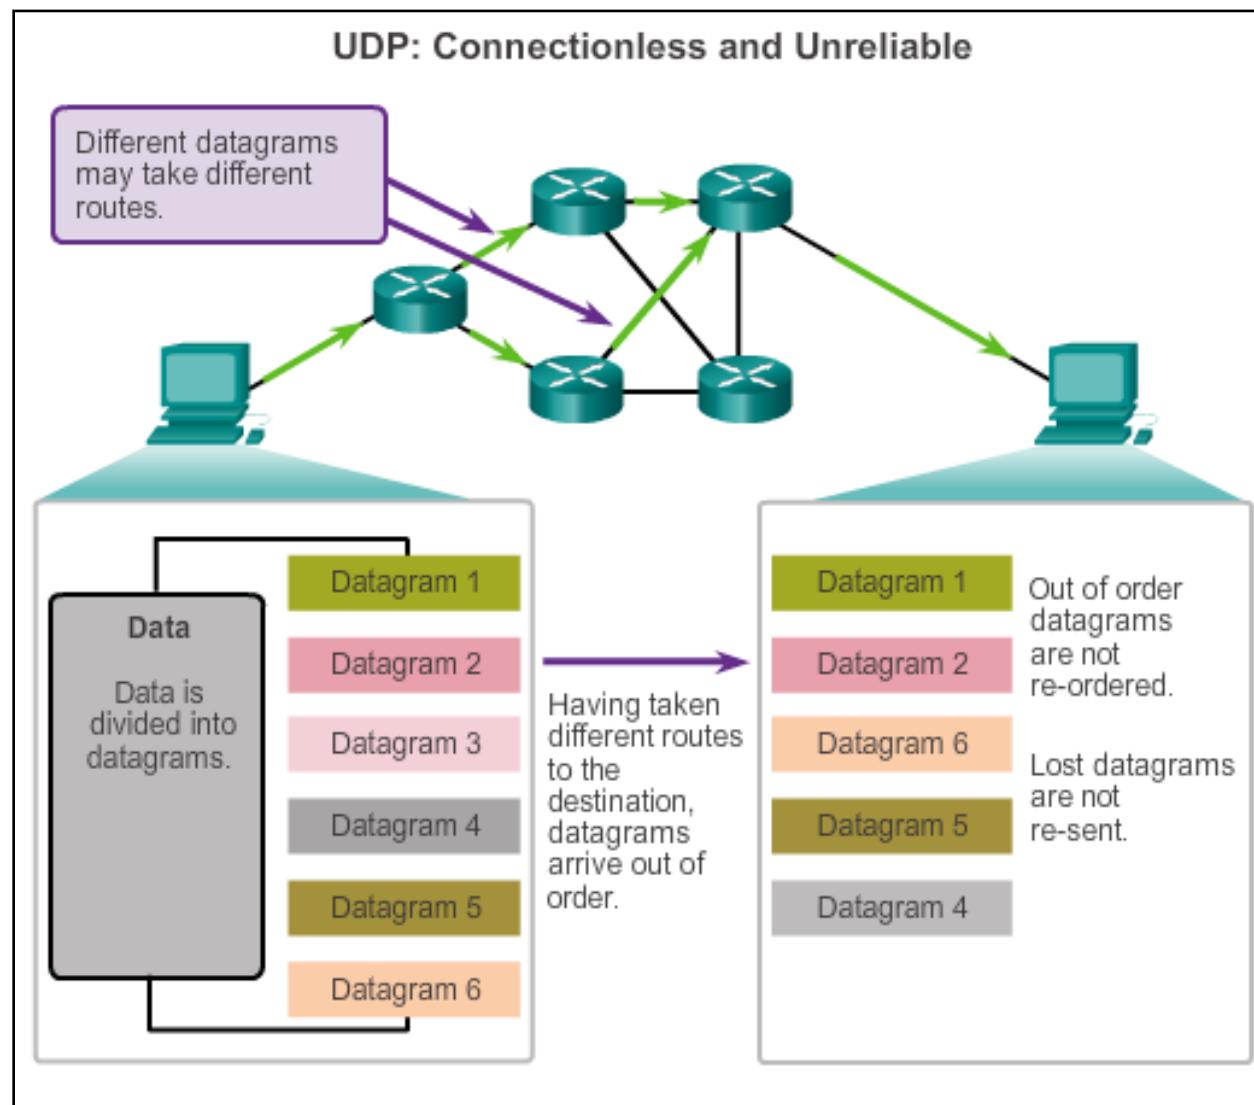

- Simple protocol that provides the basic transport layer function
- Used by applications that can tolerate small loss of data
- Used by applications that cannot tolerate delay

Used by

- DNS
- Simple Network Management Protocol (SNMP)
- Dynamic Host Configuration Protocol (DHCP)
- Trivial File Transfer Protocol (TFTP)
- IP telephony or VoIP
- Online games

UDP Communication

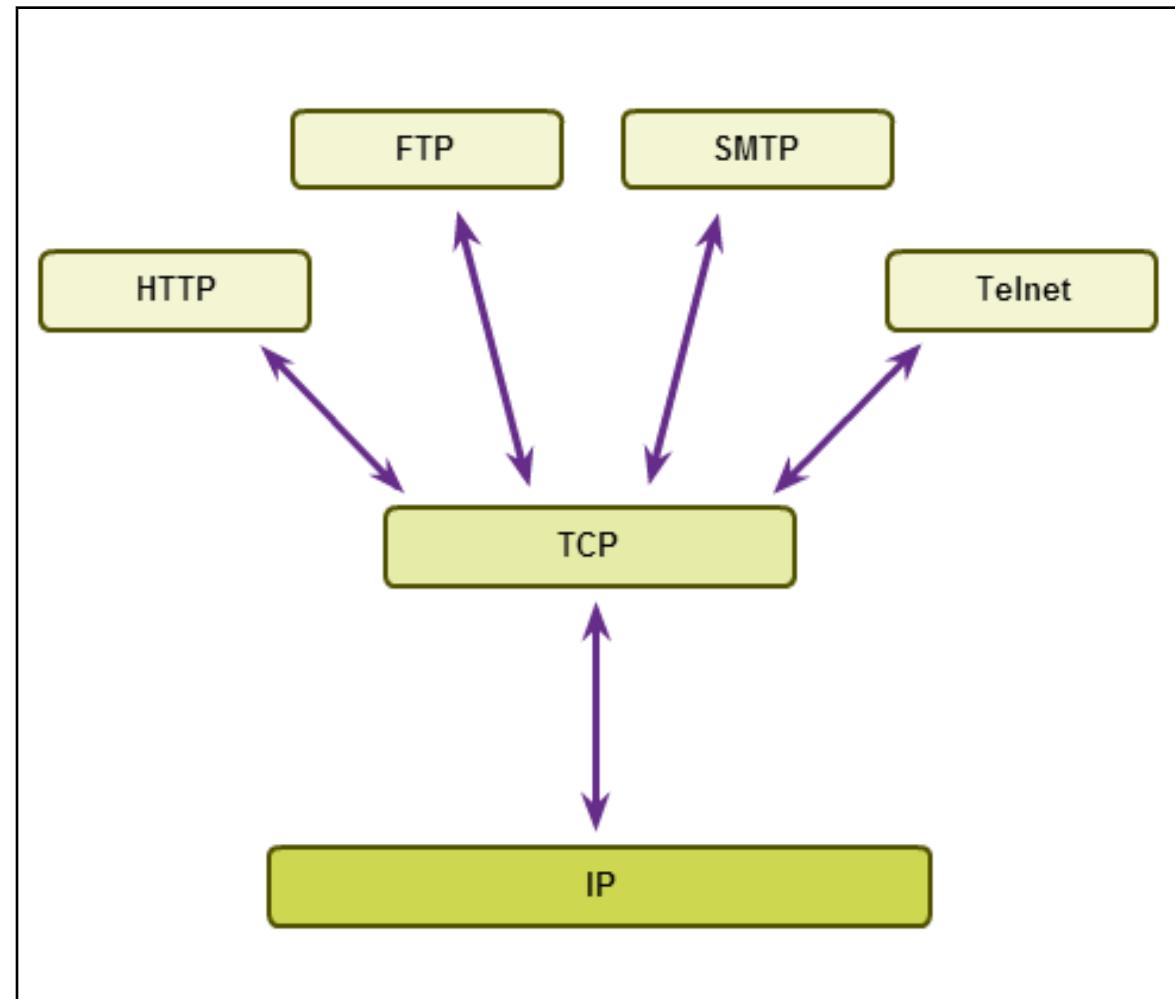

Datagram Reassembly

TCP or UDP

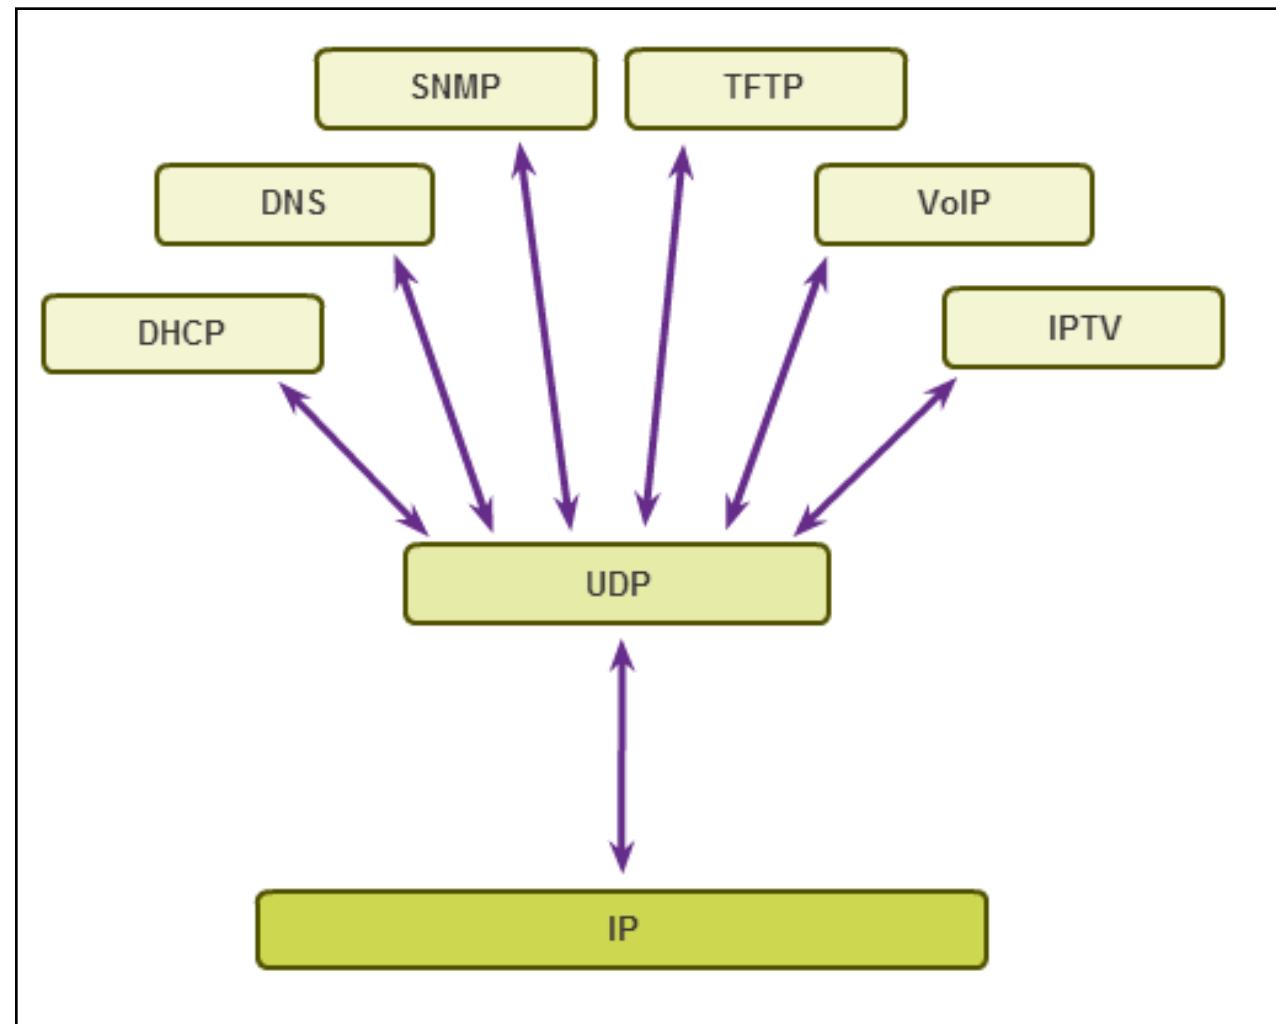

Applications that use TCP

TCP or UDP

Applications That Use UDP
